Code: YAT639A

Track: UI&UX

Yat Learning Solution

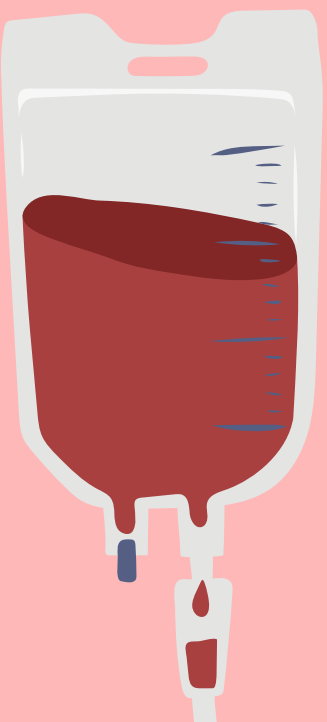

Names:

Razan Mohammed Hasan

Roaa Wael Elsharkawy

Mohamed Mohamed

Mohamed Ibrahim

Ahmed Karim

○ Persona Identity

Name Age : Ahmed Karim
Gender Last : 24 male.
Occupation : Freelance software engineer
Location : Dakahlia, Egypt

○ Background & Demographics

Marital status : Single
economic level : Middle class
Family conditions : Lives with family.
Social Devices : Smartphone (Android), Laptop

○ Quote :

"In emergency rooms, one minute can mean a lifetime."

○ Goals & Motivation

Purpose

:To donate blood regularly (every 3 or 4 months) to help save lives in critical situations.

Reasons for using the product

: To know where there is an actual and immediate need for their blood type, rather than going around aimlessly, and to keep track of their medical history in an organized way.

○ Pain Points (Problem)

Challenge

: He sees blood donation requests on Facebook too late (24 or 48 hours later) or discovers the need is in a distant province.

Frustration

: He constantly forgets the date of his last donation and isn't sure if he's medically eligible to donate again now or if he should wait.

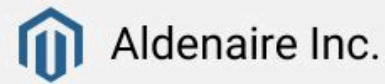

○ Behavior & Preferences

Online Behaviour

: Intermittently on their phone throughout the day, but very active in the evening. Prefers apps with fast interfaces.

Communication Style

: Prefers receiving push notifications for nearby emergencies rather than manually searching.

Sarah Mahmoud

○ Persona Identity

Name Age : Sarah Mahmoud
Gender Last : 32 female.
Occupation : English Teacher
Location : Mansoura, Egypt

○ Background & Demographics

Marital status : Married with two children
economic level : Upper middle class
Family conditions : Lives with her family.
Social Devices : iPhone, tablet

○ Quote :

"In emergency rooms, one minute can mean a lifetime."

○ Goals & Motivation

Purpose

:To secure three units of rare blood type O- for her father, who is undergoing emergency surgery following an accident.

Reasons for using the product

: Immediate access to reliable and qualified donors within the hospital's geographical area as quickly as possible.

○ Pain Points (Problem)

Challenge

: She's experiencing immense panic and anxiety inside the hospital, and traditional phone calls and blood banks haven't been able to provide her with the required blood type due to its scarcity.

Frustration

: She posted a plea for help on Facebook groups and received dozens of calls from people offering assistance, but they were in distant governorates, wasting precious time coordinating to no avail.

○ Behavior & Preferences

Online Behaviour

: She's currently using her phone very intensively under stress and is looking for any quick solution.

Communication Style

: She needs a very simple interface (just a few steps to submit a request) with an internal chat feature for quick communication with those who will respond to her plea for help without having to publicly share her personal phone number.

Empathy Map

THANK YOU
